Gemco Introduces Safety, Two Hand Control System Upgrade for the Gemcomatic

Gemco introduces a new upgrade for the Gemcomatic material handling system, the Two-Hand Safety Control system to ensure greater operator safety and eliminates pinch points. This system is a total enclosed, pre-packaged, pre-piped design that can be retrofitted to existing Gemcomatic.

Special two button control for drum raising requires two hands so the operator can not be pinched between the drum top and the retaining ring/drum-top gasket holder

The Pneumatic logic allows the Gemcomatic Valve to open only if the drum is in place and clamped against the retaining ring/drum-top gasket holder so the operator's hands can not be caught and material can not be released prematurely.

The retrofit kit comes complete with mounting instructions and all bracketry for easy installation by your maintenance department. This is a must have system for all companies concerned with complying with OSHA regulations.

Price per kit

\$6,950.00

Kit includes instructions and hardware for customer mounting. A service technician is available from Gemco to install this kit.
